

"Version With Markings to Show Changes Made"

IN THE SPECIFICATION:

The paragraph beginning on page 2, line 5 has been amended in the following manner.

The solid supports on which biological molecules are generally deposited are glass, silicon, polyacrylamide gel, polymer supports (see [American patent 5 919 525] U.S. Patent 5,919,523) or plastic (microwell plates). They may be nylon membranes.--
